

## **SUPPLY**

### **RESALE - NEW**

We will source and stock equipment you need. When we need to replace existing equipment, we generally quote replacement equipment from the original manufacturer. If there are good alternatives we will also quote them. You avoid double handling by having Pulse buy the instrument - we will enter it into our data base and calibrate it as necessary - you will always be compliant with your quality system.

### **RESALE - USED**

We will source your used equipment needs from our extended list of contacts. By replacing existing equipment with the exact model you don't have to change your test procedures to reflect using different test and measuring equipment. Once the instrument is received we will incorporate it into our data base and calibrate it as needed - you will always be compliant with your quality system.
